The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta P19 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180

```
The invention comprises the amino acid and coding sequences of nucleotic binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used a markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KDELLKVWAEQIRDLSYDIEDSLDEFKVHIESQTLFRQLVKLRERHRIAIRIHNLKSRVE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel broad spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KDELLKVWAEQIRDLSYDIEDSLDEFKVHIESQTLFRQLVKLRERHRIAIRIHNLKSRVE 120

The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LLCHLKYLSIGYSSSIYSLPRSIGKLQGLQTLNMPSTYIAALPSEISKLQCLHTLRCIGQ 660
                                                                                                                                                                                                                                                                                                        The invention relates to novel broad-spectrum resistance gene Pi2 and the NSS(1-6) ganes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (NBS) proteins NBS1, NBS2 to Magnaporthe grisea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises the amino acid and coding sequences of nucleotic binding site (NBS) proteins from the Oryza minuta P19 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta P19 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KDELLKVWAEQIRDLSYDIEDSLDEFKYHIESQTLFROLVKLRERHRIAIRIHNLKSRVE

The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  478

                                                                                                                                 The invention relates to novel broad-spectrum resistance gene Pi2 and the NSS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS3

                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the isolation of novel rice blast fungus (Pyricularia grises) resistance genes from rice strain BL-1. The genes are designated Pi-b (AAA11351). The genes are designated Pi-b (AAA11351). The genes can be used for creating rice which has high blast fungus resistance. This sequence represents the protein encoded by the Pi gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 NSKVVKTWVKQVRDTAYDVEDSLQDFAVHLKRPSWWRFPRTLLERHRVAKQMKELRNKVE 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NRSMIQRSRVGIAGKIKTCRIHDIIRDITVSISRQENFVLLPMGDGSDLVQENTRHIAFH 540
                                                                                              Nucleic acids encoding nucleotide binding site (NBS) proteins NBS1, NBS2 and NBS3, useful for producing plants resistant to Magnaporthe grisea
                                                                                                                                                                                                     The invention comprises the amino acid and coding sequences of nucleotibinding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.

polypeptide and DNA encoding it used to produce plants resistant to 1 blast disease.
                                                                                                                                                                                                              The invention provides a protein which confers resistance to blast disease onto plants. The blast disease-resistance (Pi-b) protein can be expressed by standard recombinant methodology. The novel Pi-b gene is used to produce transgenic plants resistant to the rice blast disease, which will control the disease and increase crop yields. The present sequence represents the rice Pi-b protein. The resistance gene Pi-b is located at the end of the long arm of rice chromosome 2 and displays

                                                                                                                                     The invention relates to novel broad-spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents an O. minuta Pi2 gene predicted amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                     61

The invention provides 13 novel maize, sorghum and rice RGH gene femilies (see AAZS8273 e.95) and their protein products (see AAYS842-54). The novel RGH sequences can be used for the production of transgenic plants (and their

cells, tissues and seeds) having improved resistance to disease. Expression of a novel RGH gene confers disease resistance to a plant by interacting with the complementing phytopathogen avirulence gene product released into the plant by the invading plant pathogen. The methods of the invention find use in controlling plant pests, including fungal pathogens, viruses, nematodes and insects

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
